AI Documentation Executive

Synthetic Test Pack Index and Test Plan

DEMO ONLY - ALL DATA IS FICTIONAL

Purpose

Test whether a prototype can extract selected fields from three related shipment documents, compare them using explicit rules, flag planted discrepancies and hand the result to a human reviewer. It is not a transport or customs compliance system.

Test cases

Case	Planted scenario	Expected result
CASE-01-CLEAN	Baseline: the configured comparison checks should pass.	PASS
CASE-02-WEIGHT-MISMATCH	The AWB gross weight differs from the packing list.	Flag gross weight
CASE-03-PIECES-MISMATCH	The packing list declares 12 cartons; the AWB declares 11 pieces. For this synthetic test only, 1 carton is expected to equal 1 AWB piece.	Flag piece count
CASE-04-INVOICE-REF-MISMATCH	The packing list cites a different invoice number from the invoice in the packet.	Flag invoice reference
CASE-05-CONSIGNEE-MISMATCH	The AWB consignee differs from the invoice and packing list consignee.	Flag consignee
CASE-06-MISSING-CONSIGNEE	The AWB consignee field is blank and should be escalated for human review.	Flag missing field

DEMO ONLY

Suggested test loop

1. Upload all three PDFs from one case together.
2. Extract fields into a fixed schema and preserve source references.
3. Validate fields and arithmetic with deterministic code.
4. Compare findings with EXPECTED_RESULTS.json.
5. Require the human to confirm, reject or correct every flagged issue.
6. Record true positives, false positives, missed issues and correction time.

Reference sources: trade.gov/common-export-documents; trade.gov/documents-export-transaction; dcsa.org/standards/bill-of-lading; IATA Air Waybill form reference listed in README.md. The documents in this pack are original fictional layouts inspired by general field structures, not copies of the official documents.
